OBSERVATION OF CLINICAL ACTIVITY

Only authorized persons may observe clinical activity. Such persons include Communication Disorders clinic staff, students in training (enrolled or not enrolled in Clinical Practicum), family of the client, and others approved by the client or responsible party. Students in training must have the clinician's and clinical educator's approval prior to observing. The number of observers will be strictly limited because of restricted observation space. Efforts are made to provide for videotaping of sessions to increase observation capability for students in training.
